The Secret Doctrine of Jesus

"...He said: Give not that which is holy unto the dogs, neither cast ye your pearls before swine, lest they trample them under their feet, and turn again and rend you." To the common folk Christ spoke in parables, not because He was of a common mind, but because He was an initiate and so understood how fine is the division between reason and madness, and how easily can knowledge dissolve the filament which separates these two.

"... Amongst the Jews, and Christ was of that race, we find it firmly established, and it is not a mere coincidence that the Hebrew word *Sod*, which means "mystery" or "secrets," has the same numerical value, namely 70, as the Hebrew word which represents "wine;" for mystery can intoxicate as well as refresh."

"The mysteries of the early Hebrews were closely guarded by the Sons of the Doctrine, and it would appear that many of their secrets were derived from Egypt and later on from Babylonia. We are told that Moses was learned in all the wisdom of the Egyptians and that in the first four books of the *Pentateuch* he has esoterically laid down the principles of the secret doctrine. He initiated seventy elders into the mysteries, which they transmitted from mouth to ear."

"...Though refuted by Origen, Celsus was undoubtedly right when he declared that the primitive Christian Church was possessed of a secret system, and Weishaupt, the supposed founder of the Illuminati...said:

"No one ... has so cleverly concealed the high meaning of His teaching, and no one has finally so surely and easily directed men on to the path of freedom, as our great master Jesus of Nazareth. This secret meaning and natural consequence of His teaching He hid completely, for Jesus had a secret doctrine, as we see in more than one place of the Scriptures."

"...there can be no doubt whatever that the Bible is a mystical work containing a secret doctrine which is only known to those who have been initiated into it. ... Even when ... Leibnitz published in the *Acta Eruditorum* ... his scheme of differential calculus, he did so in such a way as to hide both the method and object from the uninitiated. Newton did the same with his invention of infinite series; and algebra, as far as it was understood by the Arabians, was, as a secret, known to and hidden by certain Italian mathematicians for three hundred years."

—JFC Fuller, *The Secret Wisdom of the Qabala*, pp. 8-9.
